SUMMARY

Frontend Developer with nearly 2 years of experience developing modern web applications using React.js, JavaScript, and contemporary frontend technologies. Experienced in building reusable component architectures, implementing interactive data visualizations, integrating REST and GraphQL APIs, and managing application state. Focused on writing maintainable code, delivering responsive interfaces, and developing scalable, user-focused solutions in Agile teams.

TECHNICAL SKILLS

Languages: Core Java, JavaScript (ES6+), SQL

Frontend: React, HTML5, CSS3, Tailwind CSS, React Hooks, Redux

Backend & APIs: Node.js, REST APIs, GraphQL

Frontend Engineering: Component Design, Reusable Components, Frontend Architecture, API Integration, Responsive Design

DB: PostgreSQL, MySQL

Concepts: OOP, DBMS, Data Structures & Algorithms

Tools & Practices: Git, GitHub, Postman, Docker, VS Code, Antigravity, Debugging

AI-Assisted Development: Claude, AI-assisted debugging and development

EXPERIENCE

Frontend Software Engineer, Remote — **September 2024 – Present**

Genetic Web Technologies Pvt. Ltd.

- Developed and maintained a React-based Cyber Threat Intelligence (CTI) platform built upon OpenCTI, providing analysts with search, investigation, visualization, and enrichment capabilities for STIX 2.1 threat intelligence data.
- Created an interactive STIX graph explorer using React and D3.js, supporting multi-hop relationship exploration, node expansion, and interactive force-directed graphs.
- Implemented IP, domain, URL, and hash search workflows, with STIX object resolution, data transformation, aggregation, and custom graph traversal handled by Fast API.
- Implemented multi-hop BFS traversal, deduplication, and graph-size limiting in the backend to efficiently traverse and return related STIX entities.
- Built reusable React + Material UI components, dashboards, filters, charts, and server-side pagination/filtering for large IOC and report datasets using React Query.
- Collaborated in Agile sprints with rapid iteration cycles, utilizing Git's feature-branch workflow in a cross-functional team setting.

PROJECTS

Gym Buddy — Workout Planning & Tracking App — GitHub

- Built the full-stack fitness web application using React (Vite) and Node.js REST API with PostgreSQL database (Supabase).
- developed a custom workout engine covering over 65 exercises and including dynamic time-based planning at 4 levels.
- Created the muscle group conflict scoring system which allows to dynamically replace exercises that utilize the same equipment
- Implemented the session logging system with Supabase which stores all necessary information of the generated workout plans in a structured manner.

EDUCATION

B. Tech in Computer Science & Engineering — **2020 – 2024**

Siliguri Institute of Technology, West Bengal | CGPA: 8.73 / 10

ACHIEVEMENTS

- Solved over 300 Data Structures & Algorithms problems across LeetCode and GFG.
