SUMMARY

Frontend-focused Software Engineer with nearly 2 years of experience building React and GraphQL applications. Skilled in developing reusable UI components, interactive data visualizations, and efficient APIs. Experienced in working with Agile teams and delivering full-stack features from database to frontend.

TECHNICAL SKILLS

Languages: Java, JavaScript (ES6+), SQL

Frontend: React, HTML5, CSS3, Material UI

Backend & APIs: Node.js, REST APIs, GraphQL

Database: PostgreSQL, database schema design

Concepts: OOP, DBMS, Data Structures & Algorithms

Tools & Practices: Git, GitHub, VS Code, IntelliJ, debugging

AI & Design Tools: Claude (AI-assisted development), Antigravity, Stitch (UI/UX workflows)

EXPERIENCE

Software Engineer (Frontend), Remote September 2024 – Present

Genetic Web Technologies Pvt. Ltd.

- Built core frontend modules for a Cyber Threat Intelligence (CTI) platform using React, D3.js, GraphQL, and PostgreSQL, supporting real-time analysis of thousands of STIX threat objects.
- Developed interactive graph visualizations for STIX objects and relationships, cutting analyst time to trace multi-hop threat relationships by an estimated 30-40%.
- Designed and optimized 15+ GraphQL queries, relationships, and role-based permissions using Hasura, improving data-fetch efficiency for the CTI dashboard.
- Built a reusable component library in React and Material UI, reducing new-feature UI development time by standardizing 20+ shared components.
- Implemented observable search workflows (IP, domain, hash, URL) integrated with backend APIs, enabling faster indicator-of-compromise lookups for analysts.
- Used Claude and AI-assisted workflows to accelerate debugging and refactoring, shortening iteration cycles on complex UI logic.
- Collaborated in Agile sprints with rapid iteration cycles, using Git feature-branch workflows across a cross-functional team.
- Partnered with backend engineers on system design discussions, improving frontend-backend integration and reducing API round-trips.

PROJECTS

GymBuddy — Workout Planning & Tracking App

- Built a full-stack fitness application (React + Vite, Node.js, Express, PostgreSQL) for personalized workout plans and progress tracking.
- Designed relational database schemas and REST APIs to handle user plans, exercise logs, and progress history.
- Used Claude for rapid prototyping and debugging, and Stitch for UI/UX workflow design, accelerating end-to-end build time.

EDUCATION

B. Tech in Computer Science & Engineering 2020 – 2024

Siliguri Institute of Technology, West Bengal | CGPA: 8.73 / 10

ACHIEVEMENTS

- Solved 300+ Data Structures & Algorithms problems across LeetCode and CodeChef.
